HOW DOES PLASMACLUSTER ION TECHNOLOGY WORK?

1 Plasmacluster Ions are released

Plasmacluster Ions are positive and negative ions-similar to the ones found in nature. The ions are surrounded by water molecules when they are released into air.

2 Plasmacluster Ions attach airborne threats

The ions form highly oxidizing hydroxide radicals when they adhere to the surface of molds and viruses. They physically break down and remove the proteins from suspended microbe surfaces.

3 Ions return to air as water

The hydroxide radicals combine with hydrogen (H) to form water (H₂O) and return to the air, providing moisture.
